

Highest Overall Customer Satisfaction Among Service Provider Brands

NAPA AUTOPRO received the highest numerical score among service providers in the proprietary J.D. Power and Associates 2009 *Canadian Customer Commitment Study*[™]. Study based on responses from 14,388 consumers measuring 34 providers and measures opinions of consumers who had their vehicle serviced at the dealership or after-market facilities. Proprietary study results are based on experiences and perceptions of consumers surveyed April-July 2009. Your experiences may vary. Visit jdpower.com

THE SECRET OF MY YOUTH? MAINTENANCE, DAHLING, MAINTENANCE.

It's time to schedule your Summer Maintenance Service now!

MULTI-POINT SERVICE INSPECTION

Are Dirty Cabin Filters Preventing you from Breathing Easily in your Car?

During the hot summer months, contaminants, such as pollen, dust, mold spores and smog, can easily enter a vehicle's passenger compartment through the air conditioning, heating and ventilation systems, making the air in the car six times dirtier than the air outside.

Motorists can protect themselves and their passengers from these containments by replacing the vehicle's cabin air filter annually or more often in areas with heavy containments, or whenever heating or cooling efficiency is reduced. Cabin air filters clean the incoming air and remove allergens - especially beneficial to people who suffer from allergies.

If your vehicle is model year 2000 or newer, there's a good chance it is equipped with a cabin air filter.

"There are about 30 million vehicles in North America that currently have cabin air filters," says Marc Brazeau of Car Care Canada. "However, most people have never heard of a cabin air filter or don't know if their vehicle is equipped with one. Vehicle owners should refer to their owners' manuals for this information."

If the cabin air filter is not replaced, it can cause musty odors in the vehicle, and over time, the heater and air conditioner may become damaged by corrosion. A dirty or clogged cabin air filter can also cause containments to become so concentrated in the cabin that passengers actually breathe in more fumes and particles when riding in the car compared to walking down the street.
